

ABDULKAREEM BARGASH

JUNIOR AI ENGINEER

Amman, Jordan | +962 7 8994 4348 | aboodbargash373@gmail.com | [GitHub Profile](#) | [LinkedIn Profile](#)

Professional Summary

Junior AI Engineer and AI Engineering Diploma graduate from Al-Balqa Applied University with hands-on experience building Multi-Agent Systems (CrewAI), integrating LLMs (Google Gemini API), and engineering Machine Learning solutions. Skilled in Python, computer vision (TensorFlow, OpenCV), database design (SQL), and embedded systems. Brings 7+ years of customer-facing experience in fast-paced environments, driving strong problem-solving and adaptable teamwork.

Technical Skills

Programming Languages: Python, C++, SQL

AI, Agents & ML: CrewAI, Multi-Agent Systems, Google Gemini API, Prompt Engineering, TensorFlow, OpenCV, Neural Networks (CNNs), Machine Learning, Feature Engineering

Databases: Relational Database Design, SQL Query Optimization, ERD Modeling, Multi-table JOINS, Normalization, Views & Constraints

Embedded Systems: Arduino C++, HC-SR04 Ultrasonic Sensors, Circuitry & Sensor Integration

Developer Tools: Git, GitHub, VS Code, Problem Solving, Critical Thinking, Workflow Optimization

Technical Projects

AI Job Search Agent | *Python, CrewAI, Google Gemini API, PyPDF*

- Architected an automated multi-agent workflow using CrewAI and Gemini API to parse PDF resumes and generate tailored cover letters.
- Engineered secure environment variable configurations for API keys and implemented robust PDF text extraction techniques.

Image Classifier for Object Detection | *Python, TensorFlow, OpenCV*

- Designed a Convolutional Neural Network (CNN) for object classification; preprocessed and normalized image datasets to boost accuracy.
- Evaluated model metrics and applied dropout/regularization techniques to significantly reduce overfitting.

Relational Database Design & Management | *SQL*

- Designed relational schemas and ERDs; executed normalization and crafted optimized multi-table JOINS, views, and integrity constraints.

Arduino Distance Alert System | *C++, Arduino, HC-SR04*

- Programmed custom logic in C++ to process raw ultrasonic sensor timing data and trigger hardware alerts without external libraries.

Professional Experience

Barista & Customer Service Specialist | *Amman, Jordan (2018 – Present)*

- Managed high-volume daily operations and cash transactions under pressure with strong adaptability and time management.
- Applied structured problem-solving to streamline service processes and maintain high customer satisfaction.

Education

Diploma in AI Engineering | *Al-Balqa Applied University (Feb 2021 – 2026)*

- Relevant Coursework: Machine Learning, Neural Networks, Database Design (SQL), Digital Image Processing, Data Structures, Python.
